EDUCATION

Computer Science; 2024 – CURRENT

Lagos State University (LASU) | B.Sc. Computer Science | 2024 – Present

- Completed first year with a 3.95 CGPA.
- Modules: Artificial Intelligence & Machine Learning: Build intelligent agents, neural networks, and pattern recognition tools.

Profile

Computer Science student and full-stack developer focused on building practical web applications and AI-powered products. Experienced across frontend development, backend APIs, databases, authentication, deployment, and AI integrations, with a strong interest in turning real-world problems into useful software

EXPERIENCE

Sail Innovation hub; Nov 2023 – Apr 2024

- Builds and improves web applications using modern JavaScript and TypeScript based technologies
- Works across frontend interfaces, backend services, APIs, databases, and application integration.
- Applies Git based development workflows and focuses on maintainable, production oriented code.

Independent Software Developer; 2024 - Present

- Designs and develops full-stack applications from product requirements through frontend, backend, database, and deployment
- Builds AI-powered systems involving retrieval-augmented generation, model routing, provider abstraction, agents, memory, and tool workflows.
- Works with React, Next.js, Node.js, TypeScript, PostgreSQL, Prisma, Supabase, and modern deployment tooling
- Uses Git and GitHub for version control, iterative development, and project architecture across multiple applications.

Sail Innovation hub; Jan 2023- Mar 2023

- Designed user interfaces and user experiences for web applications, focusing on usability, visual hierarchy, responsive layouts, and consistent design systems.
- Created wireframes, user flows, and high-fidelity interface designs based on product requirements.
- Used **Figma** to design and iterate on web interfaces, components, layouts, and interactive prototypes.
- Applied UX principles to improve navigation, information architecture, accessibility, and overall user experience.
- Collaborated with development work by translating designs into practical, responsive frontend implementations.

Calisthenics Training Application – Research & Product Development

- Produced a structured research and design blueprint for a free, web-first PWA covering beginner-to-elite calisthenics progression, exercise classification, skill trees, workout programming, readiness adjustment, and deloading.
- Developed a formal research-paper draft connecting the product problem, movement framework, progression algorithms, technical architecture, safety considerations, and proposed evaluation methodology.
- Built a personal portfolio application to present software projects, technical capabilities, and full-stack development work through a polished responsive web experience

SKILLS AND INTERESTS

Languages: JavaScript, TypeScript, Python, SQL, HTML5, CSS3, C, C++, C#

Frontend: React, Next.js, Tailwind CSS, Redux Toolkit, Framer Motion

Backend: Node.js, Express.js, REST APIs, JWT Authentication

Database: PostgreSQL, MongoDB, Firebase, Supabase

Ai: Prompt Engineering, Ollama, AI Agents, OpenAI API, LangChain, RAG, MCP

Tools: Git, GitHub, Docker, VS Code, Postman, Figma, Vercel, Netlify, Docker, Api Gateway
